OBJECTIVE

Full Stack Developer with hands-on experience building production-grade systems in React and Spring Boot. Delivered real-time features, payment integrations, and role-based access control across 3 independent projects.

INTERSHIPS

FullStack Developer intern

Motioncut

Git hub : Motion Cut 🔗

- Built 3–4 full-stack web applications during the internship using the MERN stack (MongoDB, Express, React, Node.js)
- Developed a Restaurant Management website as the primary project — handling UI, backend APIs, and database schema end to end
- Built and consumed RESTful APIs for client-server communication and designed MongoDB schemas optimized for the application's data structure
- Styled all projects with Tailwind CSS for mobile-responsive, production-ready interfaces

PROJECTS

Smart Parking 🔗

React 18, Vite, React Router, Axios, STOMP/SockJS, Leaflet Maps, Tailwind CSS, Netlify

Git hub:Smartparking_frontend 🔗 , Smartparking_backend 🔗

- Built a full-stack parking platform serving 6 user roles (customer, lot admin, fleet admin, car owner, valet, super admin) with fully separate dashboards and role-based access control
- Implemented real-time slot booking, valet job coordination, and car rental marketplace covering the full lifecycle from discovery to payment and receipt generation
- Replaced polling with live WebSocket notifications via STOMP/SockJS so users see booking and valet updates the instant they happen
- Integrated interactive maps for lot discovery, slot selection, and live valet tracking with pickup image capture and Cashfree payment integration

Hotel Reservation ERP System

Spring Boot, Spring Security, JWT, Cashfree, MySQL

Github : Hotel Reservation-Frontend 🔗 , Hotel Reservation-Backend 🔗

- Built a role-based hotel backend (Admin, Manager, Staff, Customer) with JWT authentication and hardcoded role boundaries that prevent managers from escalating staff accounts beyond their permitted access level
- Engineered a full reservation lifecycle covering customer booking, manager approval, status tracking, and cancellation with ownership checks to block cross-user tampering
- Integrated Cashfree payment gateway with HMAC-SHA256 webhook signature verification, automatically confirming reservations on successful payment and rejecting spoofed webhook requests
- Built staff payroll management tracking base salary, tips, and incentives with per-staff and full-roster views alongside attendance tracking

ShopEase — E-Commerce Platform

Spring Boot, React, Spring Security, JWT, Cashfree, MySQL

Github : ShopEase-Frontend 🔗 , ShopEase - Backend 🔗

- Built a two-role e-commerce platform (Admin, Customer) with JWT-secured APIs, role-based route protection, and fully separate admin and user dashboards
- Developed a complete product management system with image upload stored as Base64, live stock tracking, MRP vs selling price display, and inline add/edit modals
- Built a cart system with stock validation that prevents over-ordering, merges quantities on re-add, and supports per-item updates and full cart clear
- Integrated Cashfree payment gateway with OTP-based password reset via email and real-time product filtering by name, brand, and category using dynamically generated category buttons

TOOLS & PLATFORMS

Tools & Platforms

- Git/GitHub
- Postman
- Vercel
- Railway
- Render

KEY EXPERTISE

Frontend

- React
- JavaScript
- TailwindCSS/CSS
- Redux Tool Kit
- Framer Motion

Backend

- Java
- Spring boot
- RESTful APIs
- JWT Authentication

Database

- Mongo DB
- My SQL

EDUCATION

Sinhgad College of Engineering <i>B.E. - Computer Engineering</i> CGPA: 6.71	2021 – 2025
Dr. Babasaheb Ambedkar college of science <i>12th MSBSHSE</i> Percentage: 83%	2019 – 2021
Carmel Academy <i>10th CBSE</i> Percentage: 67%	2018 – 2019
